Checkpoint Game Jam 2026 · Play to Prevent · Final HTML campaign

GG EZ

A fighting game about losing to a stranger, then inconveniently discovering she is a person.

Carl Kho & Dain Kim

The story

You are the wolf on the right. Across the arena, lia_ph keeps beating you. The opening matches include unreliable connections and delayed inputs. Her chat messages give you very little time to decide how to answer.

After the third loss, a controller hits your monitor. The crack leads into Lia's room in Lapu-Lapu City at 2:07 AM. You move as a translucent ghost, drifting close to her employee badge, phone and dinner. These are ordinary things in a night-shift worker's room, not clues to a villain.

Lia returns to customer-support calls. She answers her mother about sending money after payday, trades messages with her friend Mika, and keeps playing between calls. The game eventually returns you to the arena with a stable connection. This time, winning depends on combat, not on how much of her room you saw or which replies you chose.

What the player does

The complete campaign has thirteen chapters. It moves between playable fights, room exploration, subtitled conversations and short chat choices. Discovering any two of the three room objects unlocks the monitor exit; the third remains available.

Reply windows offer “okay that was clean” and “fuck off” for three seconds. Letting the timer expire is silence, not another button. The final combat result and the reply are separate decisions: either a win or a loss can lead to acknowledgment, hostility or silence. The epilogue returns to Lia's shift and ends at the credits.

How it fits Play to Prevent

GG EZ asks the player to reconsider a quick hostile response to someone on the other side of a screen. It gives the opponent a life outside the match, then offers the choice again without an empathy score or a reward for being kind.

This is the game's prevention aim, not a measured impact claim. It does not depict recruitment, identify real extremist groups, or claim that one playthrough changes a player's behavior.

The setting and the turn

The arena is bright and competitive; Lia's room is smaller and quieter. Her headset, night-shift ID, family messages and meal put the match beside work and daily obligations. Cebuano dialogue retains English glosses. The player observes these scenes rather than contacting a real person or posting a reply online.

The final rematch keeps the combat challenge intact. Seeing Lia's life does not make her stop being a skilled opponent, and acknowledgment does not buy friendship. The intended change is in how the player reads the encounter, not in the rules for winning.

Controls and accessibility

- **Fight:** A/D or left/right arrows move; W or up arrow jumps; J strikes; K casts a ranged crescent; L guards. On-screen touch controls are also available.
- **Dialogue:** Space, Enter or Continue advances a readable line. Dialogue remains subtitled; Continue can interrupt its voice recording.
- **Explore:** WASD or arrows move the ghost. Clicking, tapping or dragging sets a destination. Enter an object's space to discover it; there are no separate exploration buttons.
- **Reply:** select one of two buttons before the three-second timer ends, or remain silent.
- **Sound and progress:** the Sound toggle mutes all sound. Progress saves at chapter boundaries when browser storage is available; Continue resumes the saved chapter. Landscape gives phone text more room.

Credits and AI-use disclosure

Carl Kho: story and design. **Dain Kim:** original pixel artwork reused by this HTML campaign. The runtime loads the arena, fighters, spell effects and room from its Dain asset set; the room uses the existing retrofit and extracted character parts.

Audio: thirteen reused ElevenLabs sound effects, twenty-six synthetic dialogue recordings (Lia and the caller), and a generated twenty-second arcade loop. These are bundled locally. The audio source credits identify ElevenLabs for the additional voices and loop.

AI assistance: the repository records AI-assisted code and writing. Earlier-build credits also list Krea 2 Turbo for generated art; the current campaign instead identifies its reused pixel artwork as Dain's. The old Godot trailer and its live-action intro are not used in the accompanying gameplay montage.

The matching submitted build

This brief describes the self-contained **GG-EZ-PLAY.html** campaign, not the earlier Godot release. The game needs no account, API key or remote runtime service. The matching MP4 contains actual local browser gameplay with editorial chapter cuts; no staged interface or mockups are used.
